PROFILE

Senior Software Engineer at TrueLayer, with over a decade of experience building secure, scalable production systems across fintech, e-commerce, and tech startups. Self-taught engineer with a background in .NET, cloud platforms, and full-stack development, bringing a pragmatic, test-driven approach to every problem. Previously at Trainline and ASOS, delivering payments, fraud prevention, authentication, and cloud-native microservices used by millions of customers. Fluent in English, Mandarin, and Cantonese.

TECHNICAL SKILLS

Languages & Runtimes	C#, Rust, JavaScript, SQL, Node, .NET Core, HTML & CSS, Agentic Coding
Cloud & DevOps	AWS, Azure, Kubernetes, Messaging Broker, Terraform, Containerisation, CI/CD, Relational Database & NoSQL
APIs & Observability	REST, HTTP, gRPC, GraphQL, Logging, Metrics & APM
Practices & Security	OOP & Functional Paradigms, HATEOAS, Event Sourcing, Data Migrations, FCA & PCI Compliance, OWASP Top 10

EXPERIENCE

TrueLayer *Senior Software Engineer* Apr 2022 – Present

- Lead a team of 3 running 3 parallel workstreams (new checkout experience, payment auth flow redesign, decoupled routing layer for new payment methods), liaising with all engineering teams and setting MVP, Pilot and Post-Pilot milestones with the product owner. MVP build now in progress.
- Run sprint planning, retros and agile ceremonies, introducing a Scrumban approach that combines Scrum ticket sizing with flexible Kanban-style prioritisation to adapt quickly to changing priorities.
- Redesigned and modernised the load testing platform, transforming it into a self-service tool that enabled all teams to run and extend tests independently. The project became a company-wide success, earning recognition from leadership and peers, including mentions in all-hands by the CEO and CTO.
- Led the AmazonMQ multi-cluster migration across all .NET services, collaborating with the Rust counterpart, implementing checkpoints for phase readiness, and coordinating with stakeholders to reduce deployment risks, delivering a more reliable and scalable messaging infrastructure.
- Delivered Open Banking features, leveraged AI tools to streamline repetitive tasks, and executed critical data migrations across Kubernetes-managed infrastructure.

Trainline *Software Engineer → Senior Software Engineer* Jan 2018 – Apr 2022

- Collaborated with the solution architect to redesign Trainline's fraud platform, integrating additional data points via AWS SQS into a third-party fraud solution to identify fraudulent transactions through a multi-linked object graph.
- Orchestrated large-scale sensitive data tokenisation migration across more than 15 product channels. Contributed to the development of Card 3DSv2 and served as an integration specialist on a cross-functional task force spanning web, iOS, and Android.

- Implemented payment features in C# across Card, Apple Pay, Google Pay, and PayPal, spanning multiple payment service providers. Maintained PCI-compliant standards throughout with a strong focus on sensitive data masking.
- Contributed to modernising Trainline's payment services by migrating them to a new infrastructure stack using Terraform and Spacelift, establishing a shorter path to production.

ASOS.com *Associate Engineer → Software Engineer*

Sep 2016 – Dec 2017

- Built an AI chatbot in C# on Azure Service Fabric using natural language processing, integrated with ASOS authentication and APIs to deliver personalised clothing recommendations. Covered the full cycle from prototyping and MVP through to user testing within an internal start-up environment.
- Implemented OAuth and OpenID Connect authentication features on Azure, improving sign-on experiences, JWT token management, and user profile management across applications.
- Redesigned the user experience for an internal tool, making manual testing more efficient and intuitive.

Onalytica *Software Engineer*

Nov 2015 – Sep 2016

- Developed an influencer registration portal and internal tools full-stack using C#, JavaScript, and AngularJS, working closely with designers across the entire product lifecycle, from system integration through to interface improvement.

EDUCATION

Just IT *Junior Software Engineer*

Mar 2015 – Sep 2015

- Intensive C# and .NET training programme, marking the pivot point from biomedical science to software engineering. Built the first version of this personal website as an early hands-on project, supplementing classroom learning with a disciplined self-study regimen on Pluralsight.

Queen Mary, University of London *MSc Forensic Medical Science*

2013 – 2014

Middlesex University *BSc (Hons) Biomedical Sciences*

2010 – 2013

ACHIEVEMENTS & CERTIFICATIONS

- **MeowMath** – Built with Flutter and launched on the App Store for iOS and macOS, with Android version in development.
- 1st Place – SpecialEffect Charity Hackathon 2017, team of 5 formed within ASOS
- Microsoft Service Fabric Hack Fest 2017, London
- Microsoft Certified Professional (MCP)
- MS: Programming in HTML5 with JavaScript and CSS3 (70-480)
- MS: Programming in C# (70-483)
- Security Compass: Secure Software Design (CSP103)
- Security Compass: OWASP Top 10 (SEC101)
- Codurance Software Craftsmanship 12-week programme
